

Gulfstream **G650ER**

The World Standard™

Since 1958, when the Gulfstream I was introduced as the world's first purpose-built business jet, we have manufactured, serviced and supported more than 2,200 business aircraft.

A long-standing reputation for comfort, performance, reliability and safety has earned us a prominent position in business aviation. Just as our aircraft have evolved, so, too, has our company.

We continue to lead the industry with investments in products, technology, services and people. Every aircraft in the Gulfstream fleet is backed by an extensive and dependable worldwide support network. With each new endeavor, our history of leadership is lifted even higher, faster and farther into the future.

We hope you will join our exclusive family as an owner.

Beyond COMFORT

The Gulfstream G650ER has highly adaptable floorplans that can be tailored to meet the needs of business, entertainment and rest.

Gulfstream designers translate your preferences, your style and your needs into a cabin perfectly suited for comfortable long-range travel.

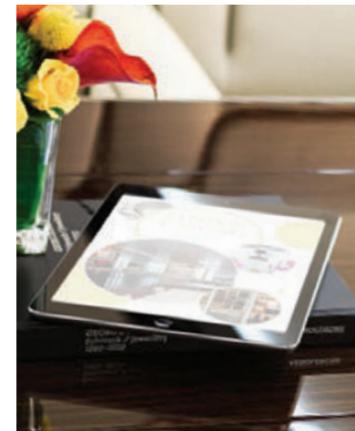

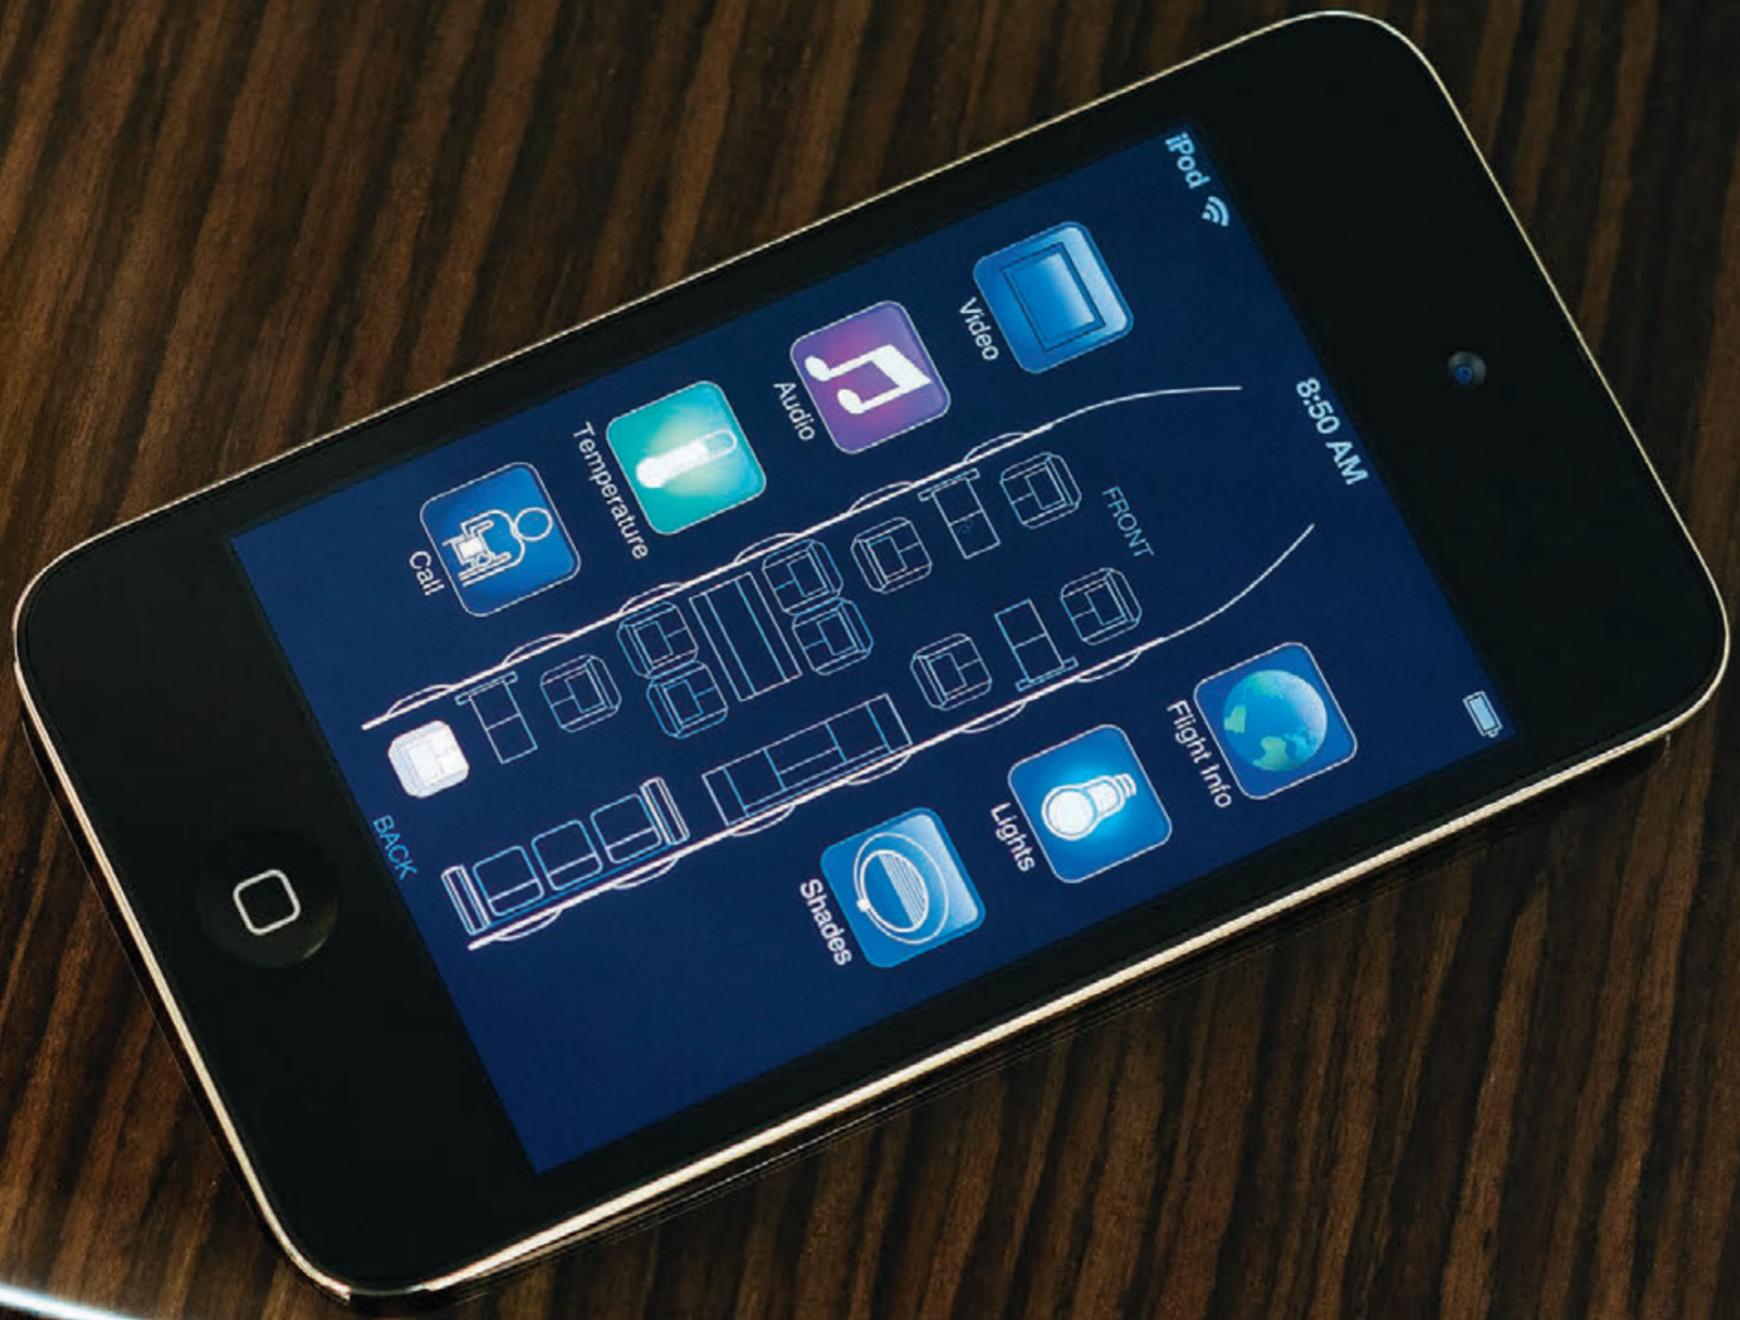

Business doesn't wait
NEITHER SHOULD *you*

The Gulfstream G650ER flies 6,400 nautical miles/11,853 kilometers at Mach 0.90, connecting you to your business associates faster than any other jet in the aviation industry.

The G650ER allows you to further capitalize on your time with a fully functional, high-speed office. Check and send emails, make conference calls and conduct meetings—whether in your airborne office or with your team on the ground.

Work in a quiet cabin that delivers only 100 percent fresh air, leaving you refreshed and fully focused on the deal at hand.

Own **YOUR TIME**

As the fastest ultralong-range business jet in the world, the G650ER is the ultimate timesaver.

With a maximum range of 7,500 nautical miles/13,890 kilometers, the G650ER flies nonstop at Mach 0.86 from Hong Kong to New York or Los Angeles to Melbourne, Australia.

The unequaled range of the G650ER opens up dozens of new city pairs, allowing you to unleash new potential.

View without EVS

View with EVS

Gulfstream's Enhanced Vision System uses a specially designed forward-looking camera that projects an infrared real-world image on the pilot's Head-Up Display. By projecting real-time visual information, EVS greatly improves a pilot's situational awareness.

In fog or on the darkest of nights, pilots using EVS can clearly see a mountain range, a runway or any aircraft or vehicles on taxiways. Better still, it works seamlessly with other advanced technology in the PlaneView II cockpit to provide a fully integrated visual environment.

The more your pilot can see, the safer you are.

FOLLOW a SAFER PATH

Synthetic Vision-Primary Flight Display is a dramatic enhancement to the Gulfstream PlaneView II flight displays. It features a three-dimensional color image overlaid with the primary flight display instrument symbology.

Combining previously certified terrain data from Honeywell's Enhanced Ground Proximity Warning System with obstacle data, and using a new state-of-the-art graphics processor, SV-PFD accurately depicts terrain, obstacles, runways and approaches at locations throughout the world.

Using SV-PFD and the Enhanced Vision System simultaneously provides an unmatched magnitude of pilot situational awareness. Your flight path is always visible, regardless of the conditions outside the cockpit window.

Top-rated in product support

YEAR *after* YEAR

Your journey begins with an exceptional aircraft and continues with top-rated product support. While the advantages of owning a Gulfstream aircraft are obvious immediately upon delivery, it is our goal to ensure that every aspect of your ownership experience is rewarding. Gulfstream maintains an unprecedented commitment to professionalism and customer service. This promise is backed by every employee.
